

TRANSBOUNDARY COOPERATION ON THE CONSERVATION OF AMUR TIGERS, AMUR LEOPARDS AND SNOW LEOPARDS IN NORTH-EAST ASIA

Alexander Karnaukhov
WWF Russia,
akarnaukhov@wwf.ru

**PROJECT COMPONENT (3)
ASSESSMENT OF THE CURRENT
STATUS OF TWO SNOW LEOPARD
SUBPOPULATIONS IN
TRANSBOUNDARY AREA
BETWEEN MONGOLIA AND THE
RUSSIAN FEDERATION**

Goal and Objectives

Goal:

- To assess the current status and identify all individuals of Snow leopards in the Russian-Mongolian border areas.

Objectives:

- Snow leopard monitoring collecting data of camera traps in the Russian side of the project area;
- Data analysis of all transboundary data.

Time Frame (planned)

Activities	Data collection from camera trapping of Snow leopards in the Russian Federation	Responsible Entity	Time Frame
1.1.	Inception meeting for Russian experts	Partner Institution	May 2020
1.2.	Set up camera traps in Eastern Sayan ridge of Okinsky district in the Republic of Buryatia	Partner Institution	May 2020
1.3.	Set up camera traps in Chikhachev ridge of Kosh-Agach district in the Republic of Altai	Partner Institution	June 2020
1.4.	Check camera traps in Eastern Sayan ridge of Okinsky district in the Republic of Buryatia	Partner Institution	August 2020
1.5.	Check camera traps in Chikhachev ridge of Kosh-Agach district in the Republic of Altai	Partner Institution	September 2020
1.6.	Compile camera trapping data	Partner Institution	October 2020

Activities	Comparative analysis of camera trap data collected from Mongolia and the Russian Federation	Responsible Entity	Time Frame
2.1.	Manage and coordinate the collection of camera trap data from Irbis Mongolian Center	Partner Institution	November 2020
2.2.	Conduct comparative study to identify snow leopard individuals and their transboundary movement in the Mongolian-Russian border	Partner Institution	December 2020 – February 2021

Activities	Project report with priority action plans	Responsible Entity	Time Frame
3.1.	Prepare a project report including analysis of outcomes from Activities 1 and 2, as well as priority action plans	Partner Institutions of Mongolia and the Russian Federation	March 2021

Time Frame (real)

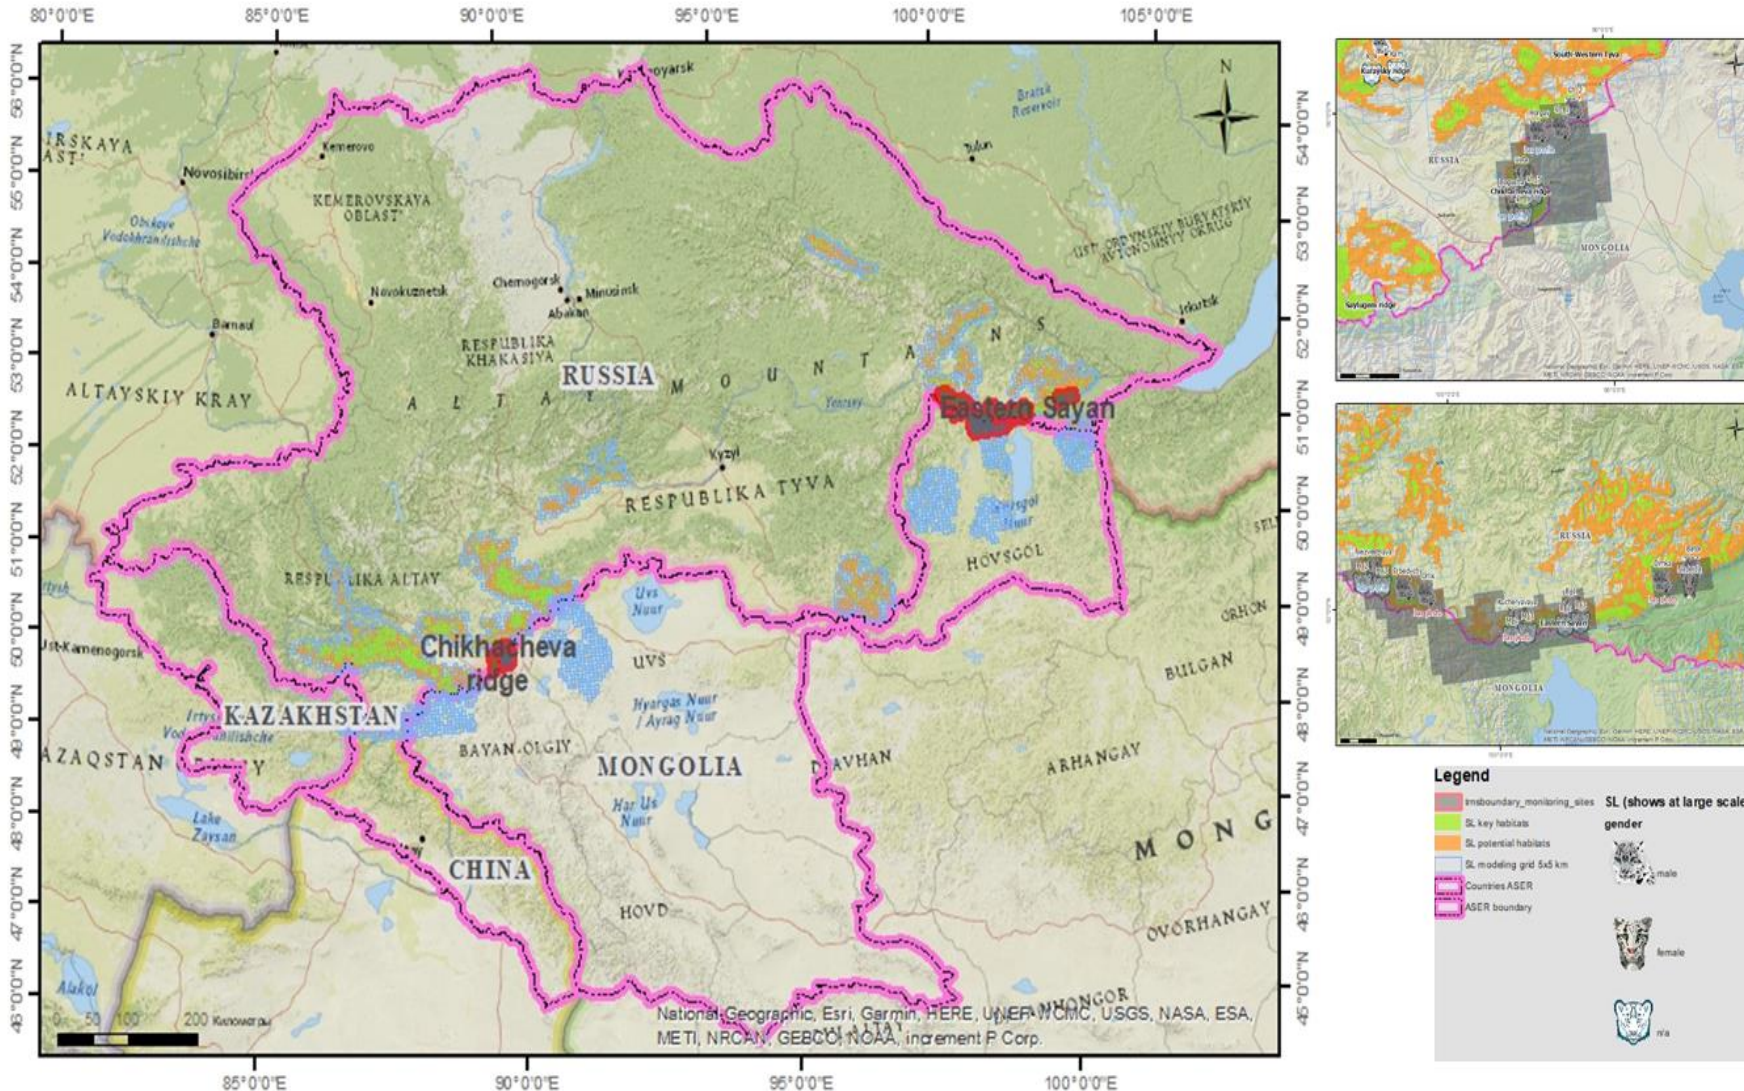

Date	Activity
June 8, 2020	Inception meeting
June 15-June 30, 2020	Field trip in Russian side of Chikhachev ridge
July 8-July 31, 2020	Field trip in Russian side of Eastern Sayan ridge
September 1-15, 2020	Preparation of interim report
10-30 September, 2020	Field trip in Russian side of Chikhachev ridge
1-10 October, 2020	Field trip in Russian side of Eastern Sayan ridge
15-31 October, 2020	Data exchange with Mongolian colleagues
December 1-15, 2020	Preparation of the year-end report
February 1 – March 30, 2021	Spatial analysis of Russian field data
April 1-30, 2021	Data exchange with Mongolian colleagues
May 1-15, 2021	Comparative study to identify snow leopard individuals
May 16 – June, 2021	Spatial analysis of transboundary data
May – June, 2021	Preparation of the final report

Project budget

#	Activity	Sum, USD
1	Localization of the mobile application for snow leopard monitoring	5 000
2	Snow leopard monitoring in Russian part	12 444
3	Data statistical analysis	3 000
4	Administrative costs (management staff salaries, managing office expenditures)	4 556
Total		25 000

Project sites

- **Chikhachev ridge** (Kosh-Agach district of Republic of Altai of the Russian Federation and Bayan-Ulgii aymag of Mongolia);
- **Eastern Sayan ridge** (Okinsky district of Republic of Buryatia of the Russian Federation and Hovsgol aymag of Mongolia)

Snow leopard distribution in Russia

Snow leopard world range

-  Key habitats
-  Potential habitats

Altai-Sayan Ecoregion (WWF priority Ecoregion)

Threats to snow leopard population in Russia

By-catch by snares when poaching other species (*Musk deer*)

Direct poaching *is rare*

Herders-SL conflict (herders) *Particularly in Tyva Republic.*

Development of infrastructure in SL habitats

Shrinking of prey numbers

Climate change

Project site 1. Okinsky ridge

The total length of all survey routes – 720 km,

Surveyed area – more than 600 square km,

of checked cameras – 26

of installed cameras – 10,

of the snow leopard signs – 32 (9 feces, 20 scrapes, 3 footprints),

of the snow leopard captures – 26 captures

of identified snow leopard individuals – 5

Project site 1. Okinsky ridge

Project site 2. Chikhachev ridge

The total length of all survey routes – 270 km,
Surveyed area – more than 1000 square km,
of checked cameras – 37,
of installed cameras – 12,
of the snow leopard signs – 43,
of the snow leopard captures – 12 captures
of identified snow leopard individuals – 8

Project site 2. Chikhachev ridge

Spatial analysis. Chikhachev ridge

2018

2020

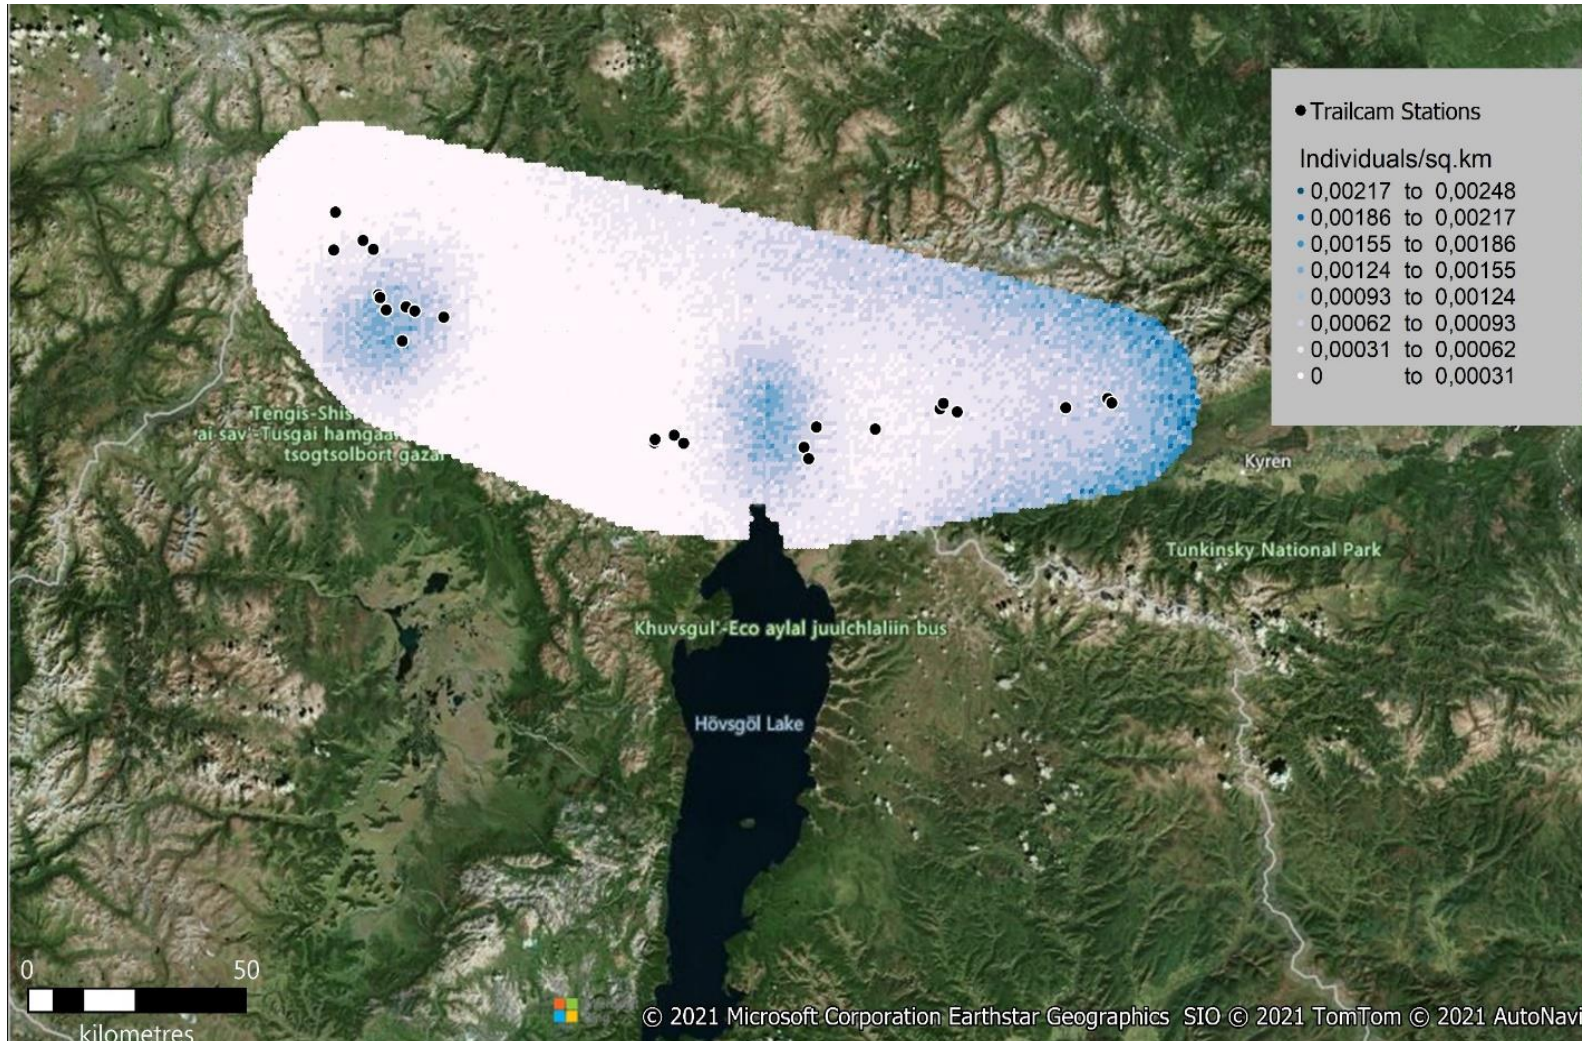

Year	Density	N
2018	0,43±0,11	22.06
2020	0,17±0,05	10.68

Spatial analysis. Okinsky ridge

2020

Year	Density	N
2020	0,04±0,01	5.99

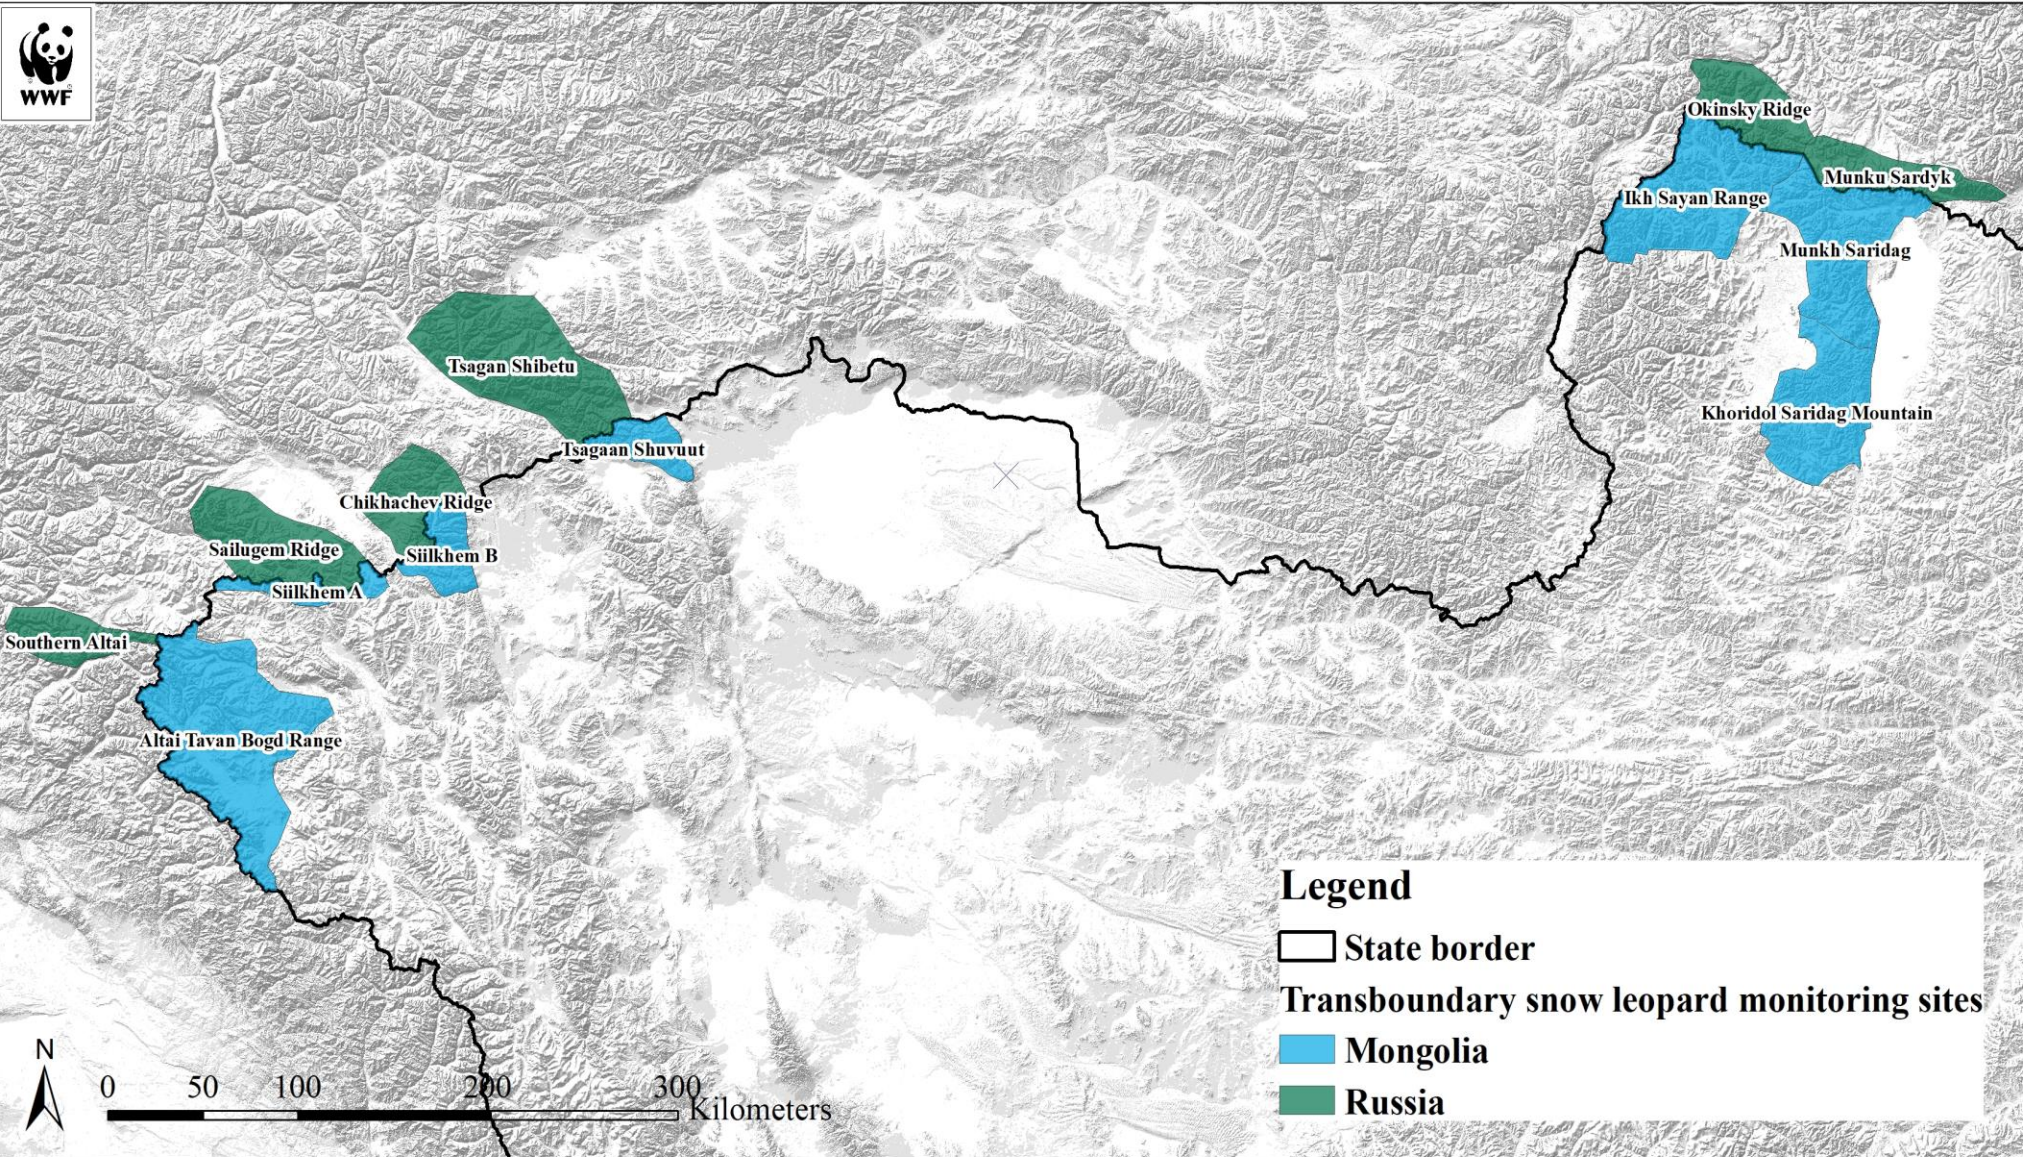

It's not transboundary data, only from Russian side of the ridge.

Cameras in Mongolia have not been checked yet!

Only some cameras was checked in Ikh Soyon ridge in Mongolia – 2 individuals were identified

Next steps...

5 transboundary populations

Regular monitoring every 2 years

New project sites: Southern Altai, Sailugem, Tsagan-Shibetu

Preliminary budget: 70 000 USD (for Russian side)

**Thank you for
your attention!**
